EVALUATION OF THE IMPLEMENTATION OF LANGUAGE POLICY AT THE JUNIOR PRIMARY LEVEL IN OWERRI EDUCATIONAL ZONE OF IMO STATE

By

JOY N. ORUWARI
Department of Curriculum Studies,
Alvan Ikoku Federal College of Education,
Owerri.

Abstract
This study evaluated the implementation of language policy at the primary school level in Owerri Educational zone of Imo state. Three research questions and a hypothesis were formulated to guide the study. A purposeful sampling technique was used to sample 697 teachers from the area of study. The researcher made use of structured questionnaire as instrument for data collection. The data were analyzed using percentages, mean, Standard deviations and t-test statistics. From the results, it was discovered that apart from English, most teachers use Igbo to teach the various subjects which is in line with policy statement: textbooks are not written in the mother tongue: there is inadequate supply of teaching materials; this inadequacy is experienced by both urban and rural schools: teachers are not fully prepared for the implementation and seminar/workshops are not organized hence they need further training.

Language is one of the symbols of a nation and it expresses the culture of the people. Language is the most important medium of communication. This is because it is main process through which the teacher puts information across to learners, while the learners respond to teaching mainly by means of language (Ibukun, 1991). In our country today, emphasis is being laid on learning the three main Nigerian Languages as a means of preserving the three main Nigerian Languages and as a means of preserving the people’s culture,

Language policy is a deliberate, logical and systematic activity designed by a given government of a nation to select a language or languages from the many languages spoken by the people in the country and assign roles to them in order to organize and develop human and material resources of the country (Njoku & Izuagba, 2004). With this in mind, the Federal Government of Nigeria came up with the National Language Policy, which says that:

In addition to appreciating the importance of language in the educational process, and as a means of preserving the people’s culture, they consider it in the interest of national unity that each child should be encouraged to learn one of the three major languages other than his own mother tongue. In this connection, the government considers the three major languages in Nigeria to be Hausa, Igbo and Yoruba. (FRN, 1981:8).

This is to foster national unity and for intertribal communication among Nigerians. The policy also states, “Government will see to it that the medium of instruction in the Primary School is initially the mother tongue or the language of the immediate community and, at a later stage. English” (N.P.E 1981:113). Afolayan (1989) asserts that the policy is the basic of a dynamic educational programme that would result in greater growth and development of both the individual citizens and the nation as a whole.

Thus, realizing the importance of mother tongue, Awoniyi (1980:29) says, “the first language of the child is part of his personality which no teacher can ignore”. He further maintained that the
mother tongue is part of the stuff of which his mind is built on. Mother tongue is the language through which the child acquires the earliest experiences of life, which forms the foundation and basis for later education. This is why Fafunwa (1985:5) maintains, “Local languages are the only way to the promised land”. He further describes mother tongue education as an inalienable right; its denial means the denial of the child’s fundamental human right.

Primary education is foundational for further learning and an effective language of instruction is indispensable for both retention and application of learning experiences. Such a language, which has been pointed out by education authorities worldwide, should be the matter of concern to all those interested in the chief’s education that the implementation of this policy should be checked after years of policy statement.

With the continued use of English Language as a medium of instruction at the three levels of Nigerian education system and a relatively undue emphasis given to English Language to the detriment of indigenous, there had been a growing concern among educationists about the deprivation, which the African child suffers because of this approach. The introduction of the National Language Policy came as an official reaction of the age-long protest against the over emphasis given to the English Language in the Nigerian School curriculum. This policy, which had stipulated the use of local language in teaching all subjects except English at the beginning stage of primary school, was supposed to have been implemented from 1982. The concern about the state of learning in primary school with regard to the implementation of this policy thus necessitated this study.

Purpose of the Study
The general purpose of this study is to determine the implementation of the national language policy of primary school in Owerri educational zone of Imo State.
Specifically, the Study is to:
1. identify the medium of instruction which teachers employ in classroom instruction:
2. determining the adequacy of instructional materials:
3. assessing teachers’ preparedness for the effective implementation of the national language policy.

Research Questions
The following research questions guided the study;
1. What medium of instruction do teachers use in the early primary classes?
2. How adequate are the instructional materials?
3. What is the state of preparedness of the teachers to effectively implement the national language policy?

Hypothesis
This study was guided by the following null hypothesis tested at the alpha level of 0.05 (P<0.05)

$H_{01}$ There is no significant difference in the extent of adequacy of teaching materials in urban and rural schools

Methodology
Design
This study is a descriptive survey meant to study the implementation of the national language policy as it affects the primary schools in Owerri educational zone of Imo state.

Area of the Study
The study was conducted in Owerri education zone in Imo-State and this zone is made up of 9 local government areas.

Population of the Study
The population of the study comprised of 6966 teachers in the 503 public primary schools in Owerri educational zone. The researcher worked on 697 teachers from the 50 schools sampled.

Sample and Sampling Techniques
Two sampling techniques used were stratified and simple random sampling techniques. First, the population was stratified into (two) sub zones. Out of the nine local government areas that make up the sub zone; 25 schools were selected from each making 50 schools, from the two sub zones. Finally, the researcher adopted the use of balloting through random picking of marked ramped paper, which is used to select the public schools from each segment. This same pattern followed the choice of 697 teachers used for the administration of the questionnaire.

Instrument for Data Collection
The researchers relating to the topic under study developed structured questionnaire. The questionnaire was meant to elicit information on various aspects of the implementation of the language policy. The questionnaire is a four point likert type of rating scale of strongly Agree (SA). Agree (A). Strongly Disagree (SD) and Disagree (D). It sought to know the medium of instruction, which teachers employ in the classroom, the adequacy of instructional materials and teachers’ preparedness for the effective implementation of the language policy.

Reliability of the Instrument
To ascertain, the reliability of the instrument the instrument was administered twice on these respondents at an interval of two weeks. Two public schools in the area were used for the test - retest reliability method. The results of the separate exercise were correlated by applying the Pearson’s Product Moment correlation statistics. The co-efficient of r = 0.76 was obtained and this was considered adequate in checking the consistency of the items in the instrument.

Validation of the Instrument
In order to give face validity to the questionnaire instrument, the searcher presented the instrument to some experts in measurement and evaluation and in educational research and statistics for their comments and for ratification. The final copy was used to carry out the study.

Administration of the Instrument
The questionnaire was administered on the respondents (teachers) in all sampled primary schools in Owerri educational Zone. The researcher personally administered the questionnaire and collected the filled ones on the spot to ensure a high rate of returns. This was done within a period of two weeks.

Method of Data Analysis
The three research questions were answered using mean and standard deviation. An acceptance criterion mean of 2.50 was used for the research questions. The t-test statistics was used to test the hypothesis at an alpha level of 0.05.

Result
Research Question One
Which medium of instruction do the teachers employ in classroom instructions?

<table>
<thead>
<tr>
<th>Subject</th>
<th>English</th>
<th>Igbo</th>
<th>Both</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>F</td>
<td>%</td>
<td>F</td>
</tr>
<tr>
<td>English</td>
<td>418</td>
<td>100</td>
<td>-</td>
</tr>
<tr>
<td>Mathematics</td>
<td>141</td>
<td>331</td>
<td>208</td>
</tr>
<tr>
<td>Igbo</td>
<td>-</td>
<td>-</td>
<td>418</td>
</tr>
</tbody>
</table>
It is evident from Table I that all the teachers used English to teach English Language and also all used Igbo to teach Igbo Language which is in line with the policy. Meanwhile, most teachers used Igbo to teach the various subjects while some used both English and Igbo to teach.

Research Question 2

How adequate are the instructional materials? In response to the research question, the subject two below:

Table 2: Mean Rating on Adequacy of Instructional Materials

<table>
<thead>
<tr>
<th>Items</th>
<th>No. of Teachers</th>
<th>CWS</th>
<th>Mean</th>
<th>Decision</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adequate of texts books written in Mother Tongue</td>
<td>697</td>
<td>495</td>
<td>1.18</td>
<td>Negative</td>
</tr>
<tr>
<td>Adequacy of other teaching materials</td>
<td>697</td>
<td>511</td>
<td>1.22</td>
<td>Negative</td>
</tr>
</tbody>
</table>

It could be seen from Table 2 that the item on whether the textbooks are written in mother tongue has a mean of 1.18; it shows that they are highly inadequate while the other item has a mean of 1.22, which also shows that they are very inadequate.

Research Question 3

What is the state of preparedness of teachers to effectively implement the national language policy?

Table 3: Mean Rating on Levels of Teachers’ Preparedness for the Implementation on the Language Policy

<table>
<thead>
<tr>
<th>Items</th>
<th>Indications of Preparedness</th>
<th>No. of Teachers</th>
<th>CWS</th>
<th>X</th>
<th>Decision</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Not speaking local dialects well enough</td>
<td>418</td>
<td>1056</td>
<td>2.53</td>
<td>Positive</td>
</tr>
<tr>
<td>B</td>
<td>Not confident in class discussion</td>
<td>418</td>
<td>1121</td>
<td>2.68</td>
<td>Positive</td>
</tr>
<tr>
<td>C</td>
<td>Attendance to workshop</td>
<td>418</td>
<td>634</td>
<td>1.52</td>
<td>Negative</td>
</tr>
<tr>
<td>D</td>
<td>Not deserving further training</td>
<td>418</td>
<td>948</td>
<td>2.27</td>
<td>Negative</td>
</tr>
</tbody>
</table>

Table 3 shows that Teachers are not fully prepared for the effective implementation of the national language policy.

Item (a) has a mean of 2.53 while item (b) has a mean of 2.68, which shows that the teachers do not speak the local dialects well enough and they are not confident in class discussion. Furthermore, item (c) which has mean of 1.52 that seminars and workshops are not organized for teachers. Item (d) which has a mean 2.27 shows that teachers deserve further training for the implementation of the said policy. Finally, the result shows that the teachers are not fully prepared.

Hypothesis 1 (H01)

There is no significant difference between the extent of adequacy teaching materials in urban and rural schools as measured by the mean rating scale on adequacy of materials (P<0.05).
Table 4: Mean Perception of Urban and Rural Teachers on Adequacy of Teaching Materials

<table>
<thead>
<tr>
<th>Item</th>
<th>Urban CWS</th>
<th>Mean</th>
<th>SD</th>
<th>Rural CWS</th>
<th>Mean</th>
<th>SD</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adequacy of textbooks</td>
<td>260</td>
<td>1.19</td>
<td>0.35</td>
<td>235</td>
<td>1.18</td>
<td>0.52</td>
</tr>
<tr>
<td>Adequacy of other teaching materials</td>
<td>269</td>
<td>1.23</td>
<td>0.63</td>
<td>242</td>
<td>1.21</td>
<td>0.58</td>
</tr>
</tbody>
</table>

Table 5: Measuring the Adequacy of Teaching Materials Data for Calculating t-test Statistics for Ho |

<table>
<thead>
<tr>
<th>Location</th>
<th>N</th>
<th>X</th>
<th>SD</th>
<th>Dr</th>
<th>S.E</th>
<th>t-cal</th>
<th>t-erit</th>
<th>Decision</th>
</tr>
</thead>
<tbody>
<tr>
<td>Urban</td>
<td>218</td>
<td>1.21</td>
<td>0.59</td>
<td>416</td>
<td>0.60</td>
<td>0.18</td>
<td>1.96</td>
<td></td>
</tr>
<tr>
<td>Rural</td>
<td>200</td>
<td>1.20</td>
<td>0.55</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

From the table above, the calculated t, of 0.18 is far less than the critical value of t (1.96, df 416, at 0.05 level). Therefore, the null hypothesis of no statistical significant difference between the mean rating of urban (1.21) and rural (1.20) schools teachers on adequacy of teaching materials is upheld. Both urban and rural school teachers experience the same inadequacy of materials in the schools.

Discussion of Findings

The findings of this study with respect to research questions revealed that the situation in Junior Primary school classes in Owerri Educational zone falls short of the expectations of the government. Though most of the teachers indicated that they taught some subjects using Igbo Language, other teachers used English Language or a blend of English and Igbo Languages to execute their classroom instruction. This is contrary to language policy prescriptions. The pupils at the Junior Primary level of education cannot be expected to be proficient in classroom instruction.

Adeloms (1991:78) maintains, “a child who is not taught in his local language is faced with two problems in the school. The first is the language of instruction and the second is the understanding of the course content in the curriculum”. The fact that two children in the same school and level, though under different teachers receive differential learning experiences, negate the good intention of the government. The child taught in his tongue should be learning better enjoying school more than the child taught in his tongue should be learning his counterparts in English Language (Ojerinde, 1986).

Academic Discourse: An International Journal

It respect to the adequacy of teaching materials. Emenanjo (1985:130) says “one of the greatest problems facing the language policy is in availability of language teaching materials and language laboratories. The implication of this inadequacy of teaching, materials is that teachers are not equipped with necessary teaching materials, which implies, that the policy is not fully being implemented. From the analysis of data collected, table 5 shows that greater number of teachers did not speak the local dialect well enough and they were not confident in class discussion, more so, workshops/seminars were not organized hence they deserve further training. This implies that teachers were not fully prepared.
The training of the teacher is very essential and indispensable because, the teacher needs to be complement in spoken and writing standard Igbo. Their shortcomings will not improve except they go for further training, and workshops organized for them on the use of mother tongue as a medium of instruction. The findings indicates that the inadequacy of teaching materials affects both urban and rural schools and it is because it same government that runs both urban and rural schools.

Conclusion

The observed difference in the medium of instruction implies that learning experiences offered to children in Junior Primary Schools should enhance the quality of education and educational opportunities in Nigeria. Moreover, the teachers are not fully prepared for the implementation of this policy because, they are not well groomed in the language and since workshops are not organized, there is no room for them to-up-date their knowledge and to be in touch with up-to-date information about what is expected of them. Some reason can be adduced for the observed shortcomings. They include; inadequate qualified teachers and inadequate instructional materials among others.

Recommendations

Based on the findings of this research, the following recommendations are made:

1. That mother tongue will be the only medium of instruction not only for some teachers but should be compulsory for all that are concerned, at the Junior Primary level.
2. Both the state and local education authorities should endeavor to provide materials, including texts written in mother tongue.
3. Government should organize workshops to update the knowledge of the teachers.
